01

About **the project**

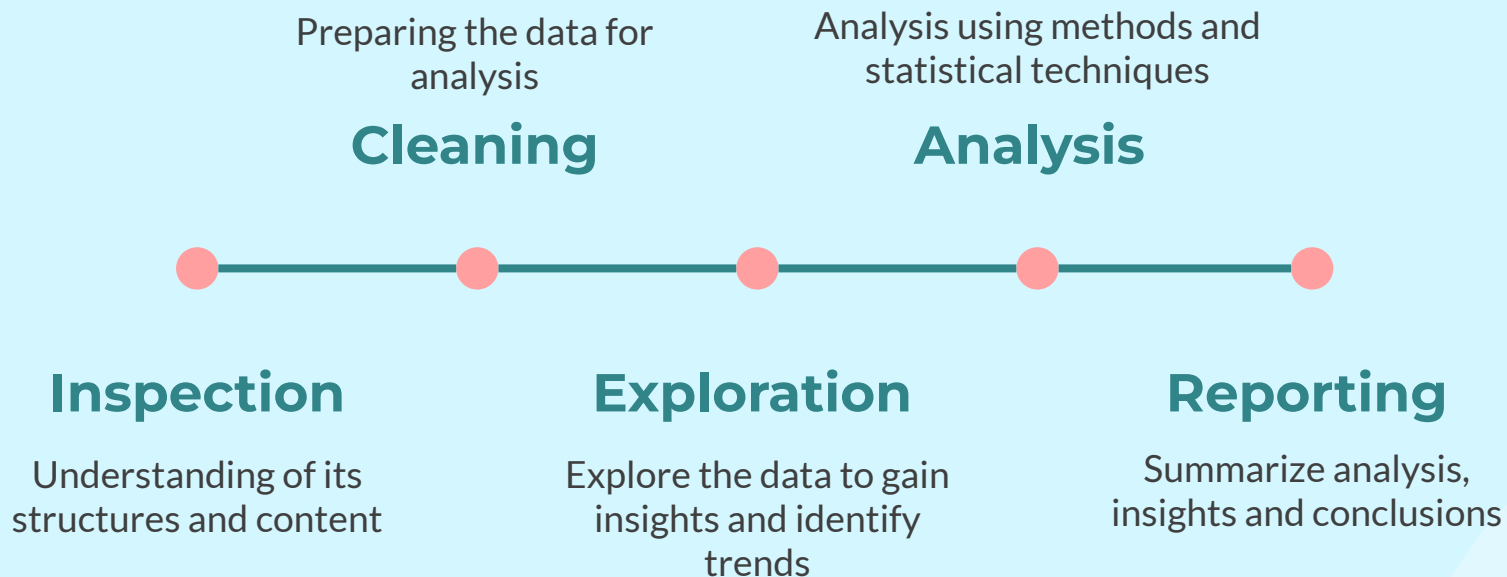

Our **hypothesis**:

The majority of shark encounters
are:

fatal and unprovoked

The structure and process of the **data cleaning and analysis**

02

Data Wrangling and **cleaning**

Cleaning **challenges**

Missing Data

Absence of values, data entry errors or incomplete records

Duplicates

Records are present more than once in a dataset

Formatting Issues

Inconsistent date formats, capitalization, special characters, and more

03

Exploratory **Data Analysis**

Exploratory **methods**

Summary Statistics

Calculating basic statistics, such as mean, count, min, max

Data Visualization

We create bar charts to visualize the variables of interest

Data cleaning

Handling the missing and not accurate data

Hypothesis Testing

Validating our hypothesis through our findings

03

Major Obstacles

Major **Obstacles**

Time

Management of the time we have to work on the project and adjusting the goal and outcome expectations.

Team Work

The reduction of the team in an important part of the process, that made us to rethink our strategy and reorganise our individual tasks.

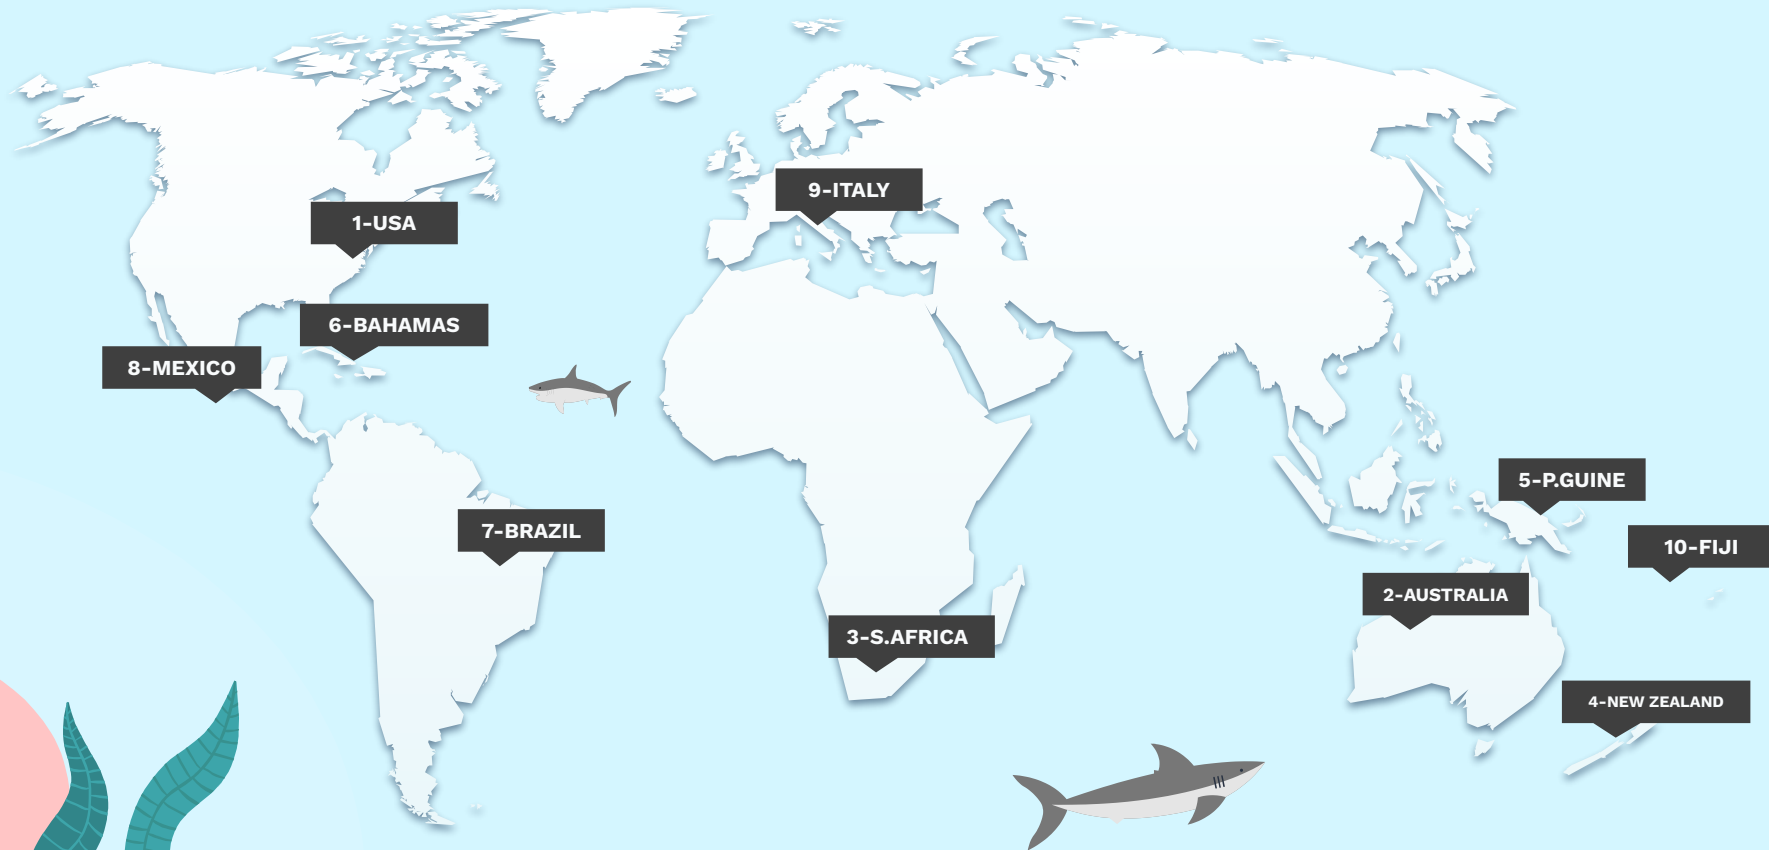

04

Conclusions and **insights**

TOP 10 countries

with the highest number of incidents of shark attacks

TOP 10 countries

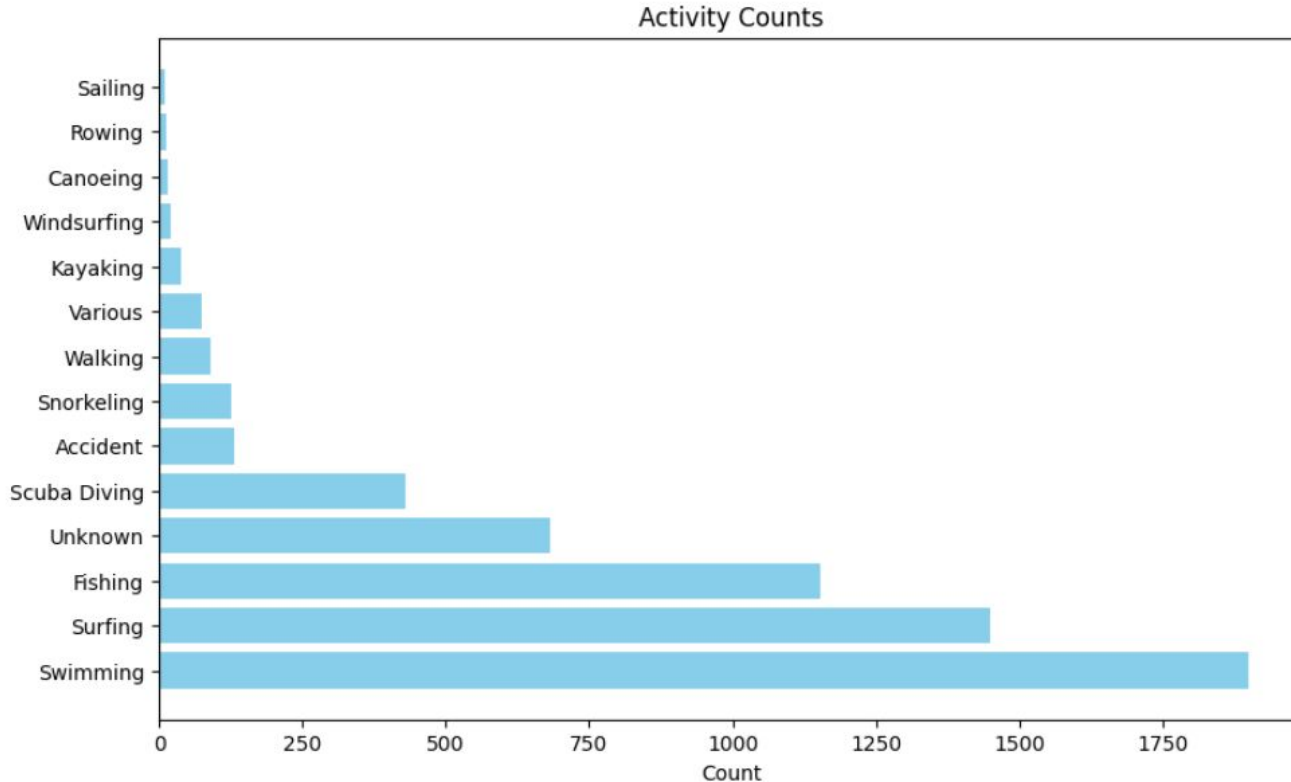

Highest number of incidents of shark attacks

Gender Distribution

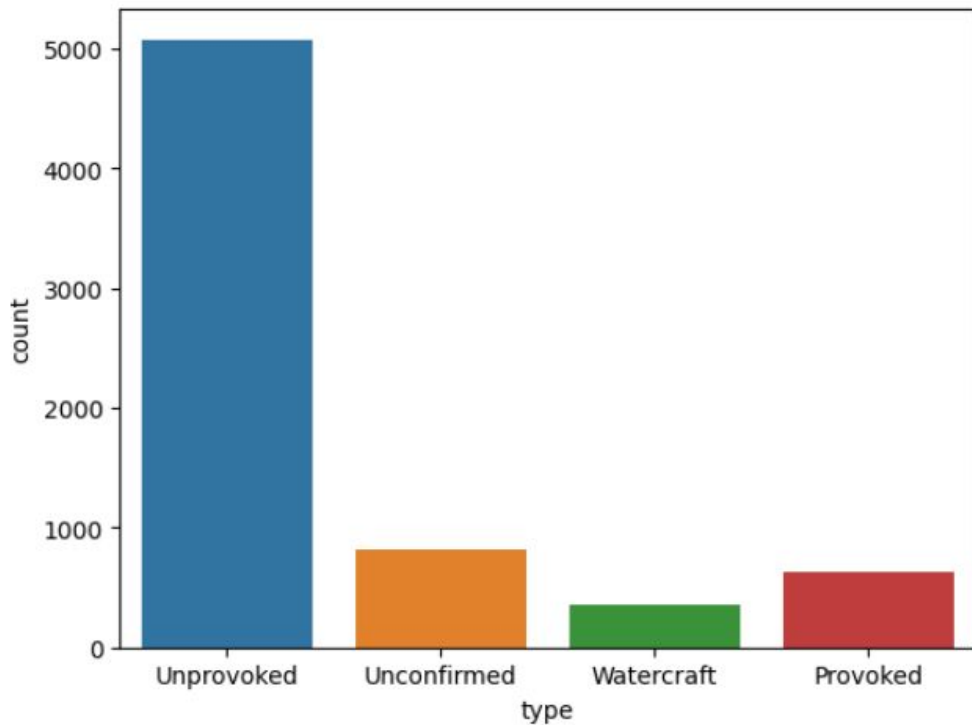

Total Number of **Main Activities**

Distribution of **Injuries**

Distribution of **types of attacks**

Based on our data analysis

The majority of shark encounters
appear to be:
non-fatal and unprovoked

THANK YOU!

**Carmen Matos
Ivet Petkova**
